Ricardo Godoy : Indians, Markets, and Rainforests: Theoretical, Comparative, and Quantitative Explorations in the Neotropics before purchasing it in order to gage whether or not it would be worth my time, and all praised Indians, Markets, and Rainforests: Theoretical, Comparative, and Quantitative Explorations in the Neotropics:

-- Journal of Economic Literature

[T]he book is a fantastic collection of information and ideas. It should be obligatory reading for the staff of all development and conservation governmental organizations and NGOs working in lowland South America. (Kim Hill, University of New Mexico Journal of Anthropological Research) With very few quantitative studies addressing the question, the author explores issues of participation in a market economy and its benefits or harm to the conservation of tropical rainforest flora and fauna, and the direct impacts on indigenous peoples of those areas... Provides an insightful overview. (Southeastern Naturalist) About the Author Ricardo A. Godoy is a visiting professor in the Sustainable International Development Program, Heller Graduate School, and research associate in the Department of Anthropology at Brandeis University. He is the author of Small-Scale Mining and Agriculture in Highland Bolivia.
